YACME SHOPPING EXPERIENCE

YACME SHOPPING EXPERIENCE

entrance

Customer accesses the PSS system by using his bonus-card. PSS blocks customers with unpaid shoppings or blacklisted. Two different access methods for Self CheckOut System:

- Express
- MicroKiosk

shopping

Customer self scans products while shopping. The handscanner keeps the customer updated on:

- shopping amount
- products' price
- promotions
- products' details

Retailers can send one-to-one marketing messages to customers

support

By using a **MC50**, **MC70** or a **PPT8800**, attendants can provide support to customer while he's still shopping:

- handling missing product entry in the PSS system
- inserting unreadable barcodes

check

Two options of rescan:

- partial: few items, the number depends on the "trust-rank" of the customer
- full: the whole trolley

"Trust-rank" growth:

- after a positive full rescan (all goods match)
- after a positive partial rescan if the ratio between checked items and items in the basket is relevant

pay

Standard interface to traditional tills
API to interface automated payment stations
